

CRYOcheck™ Chromogenic Factor IX

CRYOcheck Chromogenic Factor IX is a chromogenic assay for the determination of factor IX activity in human plasma. It is intended to be used as an aid in the management of hemophilia B in individuals aged two years or older. With a limit of quantification of 0.7% FIX activity and a test range of 0–200% FIX using one standard curve,* CRYOcheck Chromogenic Factor IX provides unsurpassed assurance in results, especially in cases of patients with severe hemophilia B.

FEATURES:

- Convenient frozen format – ready to use within minutes, no reconstitution errors
- Intended for use on automated coagulation analyzers (contact your local representative for analyzer specific applications)
- Only one calibration curve is used for the entire measuring range of 0–200%*
- 24-hour stability on board analyzer
- Thawed reagents stable for up to 48 hours in original vials when stored at 2 to 8 °C
- Reagents can be re-frozen at ≤ -70 °C for up to one month to limit reagent waste
- Excellent precision at low FIX activity

KIT COMPONENTS:

Reagent 1: Human FVIII, Human FX, Bovine FV

Reagent 2: Human FXIa, Human FII

Reagent 3: FXa substrate

Diluent Buffer: Buffer solution

CRYOcheck Chromogenic Factor IX is provided in a convenient frozen format and can be used on a range of automated coagulation analyzers. With the ability to store thawed reagents at 2 to 8 °C for up to 48 hours, or refreeze for up to one month, labs of all sizes can meet their testing requirements while minimizing wastage.

DESCRIPTION	CATALOG #	COMPONENTS	FORMAT	TESTS PER KIT
CRYOcheck Chromogenic Factor IX	CCCC09	Reagent 1 Reagent 2 Reagent 3 Tris Buffer	4 x 0.75 mL 4 x 2.3 mL 4 x 1.0 mL 4 x 10.0 mL	96*

* May vary based on the instrumentation used.
