

CRYOcheck™ Factor Deficient Plasmas

CRYOcheck Factor Deficient Plasmas are intended for use as deficient substrates in clot-based factor assays using the one-stage prothrombin time (PT) and activated partial thromboplastin time (APTT), and provide users with enhanced convenience and increased confidence in testing results. CRYOcheck Factor Deficient Plasmas

are frozen, platelet-poor plasmas which are immunodepleted and assayed at less than 1% for the specific factor by functional and antigenic methods*. The plasma is buffered and frozen, resulting in top quality products that are consistent vial to vial.
